

Ujimatec's Construction Business Management Solution for Subcontractors and Specialty Contractors

True Cloud Construction Software Gives Subcontractors and Specialty Contractors Access to Business-Critical Information Anytime, Anywhere

Seamlessly link the field and office to capture and manage labor, material costs, and inventory in one cohesive solution.

Construction projects are a sea of moving parts. As a subcontractor or specialty contractor, your ability to complete projects on time and within budget depends entirely on the level of collaboration between your central office and your field staff.

Whether you're tracking materials to and from job sites or managing time and materials on your plumbing, HVAC, electrical, mechanical, and other projects, you need accurate, timely project data. Insightful data is the key to making strategic decisions that move projects and your business forward. Unfortunately, running a business with disconnected project teams results in delayed project updates, duplicate data entry, greater risk of errors, and unnecessary costs.

With Ujimatec's true cloud construction software, you can easily manage your customers, finances—including job cost accounting—field teams and service teams in one cohesive solution. The bottom line is that you'll increase your visibility, team collaboration, and profitability on every project.

Easily manage projects and budgets

KEY BENEFITS

GAIN COMPLETE CONTROL, MAXIMIZE PROFITABILITY

- Run more profitable projects by accurately forecasting and managing job costs, payroll, overhead, profit, cash, and much

FOCUS ON THE PROJECT, NOT THE PAPERWORK

- Get the latest software updates at no additional cost

GET THE BEST OF ALL WORLDS WITH CONNECTED CLOUD

- Integrate seamlessly with best-of-breed applications
- Connect to ProEst, Procore, Microsoft Office, DocuSign, CFMA Benchmark, and many more

KEY FEATURES

Financial Management

Robust financials are simple enough for small contractors and scalable for complex contractor needs. Financial Management has standard financial processes (GL/AP/AR) and reports. In addition, it includes multi-company, multicurrency, intercompany accounting, fixed assets, recurring and deferred revenue, and cash management.

Job Cost Accounting

Easily manage AP workflows, from entering an invoice through approval routing and cutting checks. Seamless customer billing, driven by real-time project costing, includes up-to-date labor, material, equipment, and other costs. This detailed job cost information will help you proactively identify problem areas in current jobs and provide you with information to estimate future projects accurately.

Project Management

Gain a complete view of your project details—including real-time field updates—providing instantaneous information flow between your project management team, back-office workforce, and management. Easily manage and track all activities, issues, changes, project documents, and job costs from one central area.

Payroll

Flexible payroll adapts to any construction organization. This solution supports multiple unions, locals, classes, benefit packages, complex wages, certified wages, executive compensation, and commission structures.

Commitments

Control cost overruns by automating your project commitments and change order processes. Easily create and track your subcontracts' status and purchase orders, including comparing budgets to actuals, tracking line-item committed costs, and monitoring up-to-date vendor payment status.

Compliance

Effectively manage lien waivers and releases, insurance certificates, and status updates, providing expiration and other alerts to staff and suppliers.

Customer Relationship Management

Easily see real-time data on all customer activities, including quotes, orders, invoices, payments, support cases, and service calls. The CRM module also includes a self-service customer portal that lets customers access the information they need.

Mobile App

Get anytime, anywhere access. Quickly see critical reports on phones and tablets and give field teams and subcontractors tools to electronically enter employee time and equipment details. Access the complete system over any device and search for all project details from one global search box.

Advanced Material Management

Streamline the management of project materials, including receipts and issues for purchased materials. Create requisitions with approvals workflow and create purchase orders to ship materials directly to a project location, creating an efficient workflow for job site deliveries.

Change Management

Control cost overruns by automating your project commitments and change order processes. For example, manage back charges or reduction in vendor commitments through the entry of a negative change order.

About Ujimatec

Ujimatec provides customer success & value driven software solutions to accounting, finance & executive teams within the construction industry across North America. Today, Ujimatec's portfolio of solutions provide an integral suite for business management, empowering users with intuitive, integrated, cloud-based products.
