

BUILD BETTER WHEREVER YOU ARE

Accounting | Project Management | Payroll |
Inventory | Service Management | CRM | Mobile

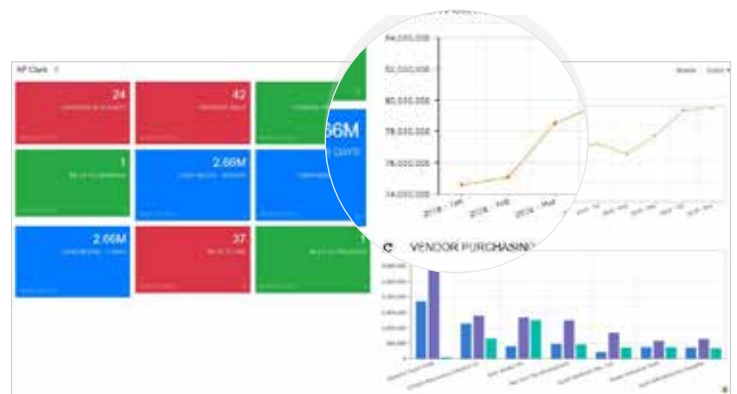

DRIVE YOUR BUSINESS

Ujimatec puts everything at your fingertips, saving you time and effort at every turn. Whether you are a general contractor, subcontractor, specialty contractor, homebuilder or land developer – you can rely on Ujimatec's true cloud construction software to handle accounting, project management, payroll, inventory, service management, CRM and mobile – in one cohesive solution.

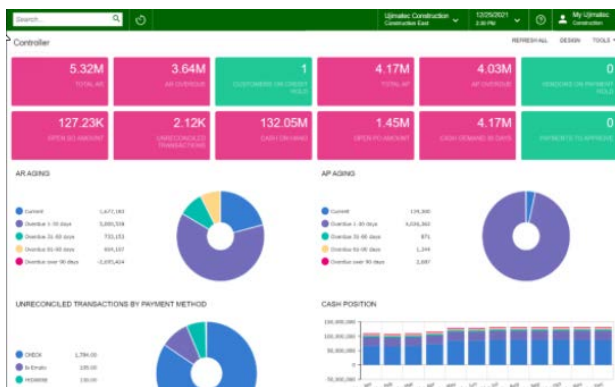

ACCOUNTING

Complete Control, Maximize Profitability

Maximize project profitability, lower risk and easily manage financials. Ujimatec's Construction Business management Solution (CBMS) allows you to accurately forecast and manage job costs, profits, cash and taxes.

Control project costs and improve profitability

Easily manage projects and budgets

PROJECT MANAGEMENT

Focus on the Project, Not the Paperwork

Stay on top of every project and budget with real-time information at your fingertips. With Ujimatec's CBMS you'll make decisions more effectively and easily manage and track all daily activities, issues, changes, project documents, and job costs from one central area.

BUILD YOUR FUTURE

PAYROLL

Easy-To-Use and Reliable

Simplify payroll setup, processing, and reporting by managing your payroll in-house. Easily capture time and track labor rates for certified and union payroll projects and more. Give employees access to enter time from anywhere eliminating late time cards, costly mistakes and duplicate data entry.

INVENTORY

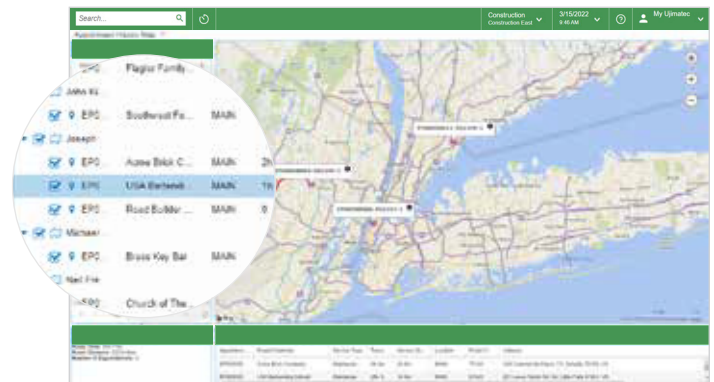

Inventory Management Made Simple

Control system-wide inventory to manage your distribution process efficiently and without losing track of costs. Easily manage inventory delivered to your project with the flexibility of using project sites as distribution hubs.

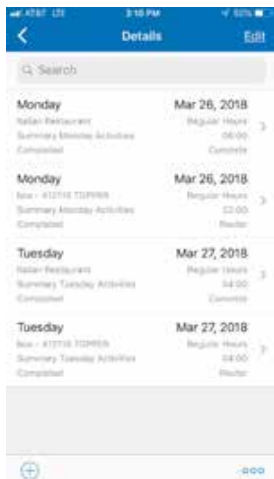

SERVICE MANAGEMENT

Increase Field Service Productivity

Streamline processes, reduce response times and costs for your field service team resulting in increased customer satisfaction and revenue. Ujimatec's Service Management provides a complete set of functionality for your field service operations.

At-a-glance appointment history

Capture time, expenses, project issues and more

CRM

Communicate with Customers, Grow Your Business

Customer Relationship Management was built into Ujimatec from the very beginning. From marketing, quoting, and sales to delivery and post-sales support, customer information is always up-to-date and accurate.

MOBILE

Connect Your People and Projects

Your employees will thank you for having access from a smart phone. Productivity will increase making your construction projects run even more smoothly.

TRUE CLOUD CONSTRUCTION & ACCOUNTING SOFTWARE

With today's complex construction business needs, it's essential to have a modern software solution that you can always rely on. Consider these benefits true cloud software provides:

Avoid paying for computer servers and hardware maintenance

Ujimatec offers a true cloud option where you have the computing resources you need—and it's easy to get more when you need it.

Let us handle your software updates automatically

No need to spend your company's staff time making updates to the application software and operating system. These are handled quickly by trained IT professionals.

Secure your data

Full-time, highly experienced security professionals are guarding your data. Your data is backed up regularly, on a series of distributed servers, so that it will still be available in case of a disaster.

Connect to other construction solutions

Take advantage of cloud integrations with Procore, ProEst, Prophix, DocuSign, Smartsheets, GoForms, Power Bi and other productivity software to efficiently run your business.

" The construction industry has been slow to adopt a digital transformation, and Ujimatec can facilitate that industry by integrating many different apps used today into a single version of the truth, and with strong mobile capabilities. They will also be able to solve similar industry issues across project focused companies needing Cloud computing technology. "
